Adjusting and Testing Package

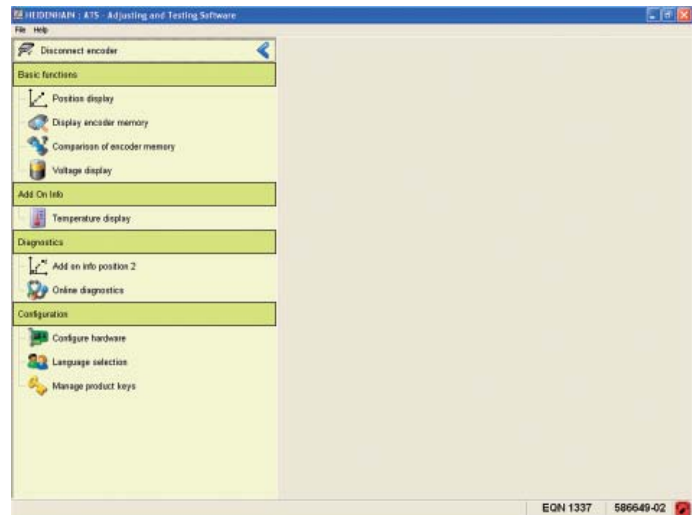

HEIDENHAIN offers an adjusting and testing package for diagnosis and adjustment of HEIDENHAIN encoders with absolute interface. It consists of the following components:

- IK 215 interface card for direct installation in a PCI expansion slot of a PC.
- **Adjusting and Testing Software (ATS)** with integrated local encoder database for automatic encoder identification.

The functions supported by the ATS software vary depending on the encoder and the encoder interface. The EnDat interface makes it possible not only to display the position value but also to read out the online diagnostics, to read or write parameters, shift datums, set write-protection and use further inspection functions, etc .
